

**BeanAir & Russian MEMS Association join forces to provide innovative Wireless Solutions**

**Paris, France – December 2011 - BeanAir & Russian MEMS Association** signed a partnership agreement to develop and manufacture innovative products, thereby providing Wireless Solutions for different market segments. This collaboration is signed with a goal to meet future projects, potential customers and tenders pertaining to the Russian market. Also for active participation in seminars, conferences, trade shows, webinars, training programs based in different parts of the world. Opportunities for partners will be welcomed on high-tech projects in Russia, France and rest of the world.

*BeanAir®*, a French manufacturer of smart “Plug and Play” Wireless Sensor Network(WSN) dedicated to industrial machine monitoring, embedded measurement, engineering structure & building management system, isolated sites & harsh environment. *BeanAir®* provides wireless sensors for both dynamic measurement (vibration, shock and deformation) as well as static measurement (temperature, humidity, tilt, binary and analog measurement). Its wireless technology has a very high availability rate in harsh environments.
