

## Press Release

***BeanAir introduces the all new BeanDevice® SUN-TH - featuring four measurement technologies (light, temperature, humidity and dew point) in a small casing.***

**Paris, France – 16<sup>th</sup> January 2012**

**BeanAir** introduces the all new **BeanDevice® SUN-TH** a Wireless sensor integrating four measurement technologies (light, temperature, humidity and dew point) all coming in a small (55mmx53mmx35mm) and ultra-light packaging (< 100 gr). This new **BeanDevice® SUN-TH** offers a great accuracy (humidity  $\pm 1,8\%$  RH , temperature  $\pm 0,2^{\circ}\text{C}$ ) and a high long term stability (humidity < 0,5% RH/year , temperature < 0.05 K /year).

The **BeanDevice® SUN-TH** is ideal for monitoring purposes in laboratories, hospitals, cold chains, clean room, green house and more. In standard, the **BeanDevice® SUN-TH** incorporates an onboard DataLogger (up to 32700 logs), a IP66/67 casing and a 1300mAh Lithium primary cell. A calibration certificate (standard connected COFRAC) is delivered on request.

Discover the **BeanDevice® SUN-TH** in action at the **Embedded World 2012 trade fair at Nürnberg, Germany from 28 February – 1 march 2011**. Visit our website for a **free invitation!**

*BeanAir®*, a French manufacturer of smart “**Plug and Play**” **Wireless Sensor Network(WSN)** dedicated to industrial machine monitoring, embedded measurement, engineering structure & building management system, isolated sites & harsh environment. **BeanAir®** provides wireless sensors for both dynamic measurement (vibration, shock and deformation) as well as static measurement (temperature, humidity, tilt, binary and analog measurement). Its wireless technology has a very high availability rate in harsh environments.
