

## **BeanAir's Wireless Network Coordinator BeanGateway goes "PC-Less"**

**Paris, France – December 3, 2011** – BeanAir's Wireless Network Coordinator BeanGateway now comes with an expandable external memory. The expandable Micro SD\* slot present in the BeanGateway allows you to use the Micro SD\* of your choice instead of a limited internal memory found in other devices that are available in the market. Now you can store all your measurements with your own Micro SD\* and those measurements can be easily extracted. The BeanGateway can be used in remote areas by means of storing all your measurements in a Micro SD\* memory card that can be easily inserted on your BeanGateway. There is no need for a PC to store your measurements!

*\*Micro SD is not provided with the default packaging*

*BeanAir®*, a French manufacturer of smart "Plug and Play" Wireless Sensor Network (WSN) dedicated to industrial machine monitoring, embedded measurement, engineering structure & building management system, isolated sites & harsh environment. **BeanAir®** provides wireless sensors for both dynamic measurement (vibration, shock and deformation) as well as static measurement (temperature, humidity, tilt, binary and analog measurement). Its wireless technology has a very high availability rate in harsh environments.
